SUMMARY

3 years turning messy operational data into AI workflows that enterprise and government clients actually trusted. Built the validation and escalation logic that closed a \$1.5M contract. At Cornell, built a multi-agent RAG system with under 2% hallucination across 85 adversarial test cases. Now looking for Forward Deployed or AI Solutions Engineer roles where building is part of the job

EXPERIENCE

Aereo - Drone-Tech & Geospatial SaaS | *Product Manager*

Nov 2022 - Aug 2025

- Built the validation and escalation logic that let field operators act on AI-driven geospatial outputs (CV segmentation, change detection) for mining and infrastructure clients, supporting a \$1.5M deal and \$500K contract.
- Scaled a production imagery pipeline from ~25K to 20M+ drone images, including 7M in a 5-month enterprise push, by defining ingestion requirements and aligning CV outputs with SLAs.
- Designed metadata alignment and validation standards across Processing and Analytics platforms, making automated outputs reliable enough for enterprise and government use - lifting adoption ~1.5x and cutting support tickets ~30%.
- Shipped a structured intake and prioritization framework across 3 teams (PRDs, QA, dependency tracking), cutting time from requirement to shipped feature by 50%.

ServiceNow, Cornell Enterprise Engagement | *Enterprise Agentic AI Product Consultant*

Jan 2026 - May 2026

- Ran a hands-on Build Agent test across no-code, low-code, and pro-code personas using Claude Code, surfacing an onboarding access gap that reframed the strategy from "fix scripting" to "fix AI discoverability."
- Built a 6-parameter scoring model that narrowed 8 strategic bets to 5, and designed a trust-tier model for autonomous agent operation, presented directly to the App Engine GM.

PROJECTS

Graduate AI Research - Site Intelligence Agent for Field Workers

Feb 2026 - May 2026

Cornell University

- Built a multi-agent RAG system (Python, LangChain, Chroma) with three explicit routing paths - confident answer, conflict surfaced, programmatic escalation - holding hallucination rate under 2% across 85 adversarial eval cases.
- Shipped a gamified Streamlit demo of MAGMA's multi-graph memory architecture, letting agents detect infrastructure changes across 100+ spatial inspection histories.
- Built a pipeline risk intelligence agent (Apache Sedona, Claude API, FastAPI, React) that routes conflicting FEMA/USGS/Census risk signals to auto-alert, human-review, or low-risk - explicitly surfacing disagreement instead of averaging it away, with every decision logged and auditable.

ACHIEVEMENTS

- **Founder, PokerClothingStore.com (2020-2022):** Built e-commerce product from zero, led 5-person team, 400+ conversions in 18 months.
- **Spotlight Award at Aereo:** Recognized for pivotal contributions driving product growth and securing multi-million-dollar contracts.

EDUCATION

Master of Engineering, Engineering Management

Aug 2025 - May 2026

Cornell University (GPA: 3.67/4.0)

Ithaca, NY

Bachelor of Engineering, Computer Science

Jul 2016 - Jun 2020

Visvesvaraya Technological University (GPA: 8.5/10)

Bangalore, India

SKILLS

- **Agentic AI:** RAG pipelines, multi-agent orchestration, MCP server development, LangChain, Chroma, MAGMA architecture, LLM evaluation, human-in-the-loop design, confidence scoring, GenAI Solutions, Machine Learning
- **GeoAI & Spatial:** geospatial data products, imagery processing pipelines, spatial analytics, drone data, metadata alignment, data governance, GeoAI reliability
- **Product & Delivery:** end-to-end product lifecycle, PRDs, roadmap execution, enterprise customer engagement, stakeholder management, QA & UAT, GTM strategy
- **Tools:** Python, SQL, Claude Code, LangChain, QGIS, Streamlit, React (working knowledge), Typescript (working knowledge)
